

Kyndill Controller Press Kit

Welcome to the Kyndill Controller press kit. If you cannot find what you need, please email Tim Pelesky for marketing related questions: tpelesky@onexia.com.

About Kyndill Controller

Kyndill Controller is bringing automatic plasma torch height control to end users across the United States by providing a system that easily mounts to new and existing CNC gantries. The simple plug-and-play setup makes it perfect for hobbyists and the durable, field tested design makes it the ideal solution for professionals running a CNC system as part of a high demand machine shop. A Kyndill automatic torch height controller saves time, money, and eliminates waste material by continuously making adjustments through the cut process assuring a perfect cut every time.

Based in Exton, PA the Kyndill Controller is a product of ONExia Inc. By taking 25 years of experience in precision machine automation and applying it to torch height control the result is a cost effective system designed, machined, and built in the United States of America. For more information about Kyndill Controller, please visit www.kyndillcontrol.com. For more information about ONExia Inc., please visit www.onexia.com.
